Detratalk

VoIP Dispatcher Console
Voice over IP solution for eDMR networks

The DetraTalk device is a communication dispatch based on a PC platform which can regroup several modules and communications accessories, designed to work with the **eDMR** digital radiocommunication systems.

The DetraTalk could also be used like a simple operating console.

Under IP connectivity, the DetraTalk device is connected directly to the core network of the **eDMR** system.

Very intuitive and easy to use, the DetraTalk can integrate an **eDMR** network no matter of its size.

An unlimited number of DetraTalk with different locations can be deployed into the **eDMR** radio system.

Provide with an excellent audio quality, the use of one or several vocoders allows to DetraTalk, the listening and following of several communications.

(Until 5 simultaneously)

With DetraTalk, dispatchers and teams on the field, always got a secure and reliable path of communication. DetraTalk simplifies dispatcher functions ensuring its operations during crisis management.
