

Welcome to TPL Systèmes Summer newsletter

These days Europe's economic environment is proving particularly challenging. Public Authorities and Industry are carefully selecting investments with very challenging criteria. Almost all tenders in Europe have been emphasizing price just as much as performance criteria. **TPL Systèmes** is coping with this challenge through a high level of innovation and organizational flexibility.

With its partners, **TPL Systèmes** was able to come up with several innovative solutions internationally e.g. first TETRA pager in Denmark to Bornholm Island's Fire Brigade Unit, 2-WAY POCSAG / GPRS "PAGER BIRDY III" in Belgium and various customers throughout the UK, Austria and Switzerland currently trust the robust waterproof BIRDY WP.

International Technical Days TPL Systèmes 2013

TPL Systèmes International Partners Network is growing.

We are proud of our Partnership with very important local players around Europe. It's a fundamental step for future success in local marketing expertise and technical support.

During the TPL Systèmes International Technical Days, which took place in Sarlat on July 3rd & 4th, 2013, the solution and product road map for the coming months was introduced to our Partners.

Visit of SDIS 24 in DORDOGNE

International Technical Days participants visited the Area 24 Dordogne Fire Fighters Call Center where 1500 BIRDY III, 55 Pilot Mobile, 45 POC-SAG transmitters from **TPL Systèmes** are operating.

A great opportunity to see a fully integrated Alerting System with localization and feed-back channel.

TRADESHOWS 2013

TPL Systèmes was present at several Exhibitions the first half year 2013. Below are some impressions...

Critical Communications World 2013

TPL Systèmes exhibited at Critical Communications World 2013 (previously Tetra World Congress), May 22-24 in Villepinte, Paris, France.

- Presented the latest products and solutions as well as our BIRDY TETRA pager, and held a speech at the live show case about the progress on marketing its solution.

Civil Protect 2013

This tradeshow is a major event for the Italian and South Austrian region for Public Safety, Fire Protection and Emergency agencies.

TPL Systèmes was present at Civil Protect 2013, from March 22nd to 24th 2013, in Bolzano, Italy.

- Getting in touch with potential partners and the local authorities was an important goal in order for us to better understand the regions' current and future requirements, as well as get an overview of ongoing regional projects.

PRODUCT news

eBIRDY pagers remote management system

With the eBIRDY Pager Management systems you can handle software updates and program files remotely. No need to bring the pager back to the control center. Just put it in a

cradle locally at the station and you will have the latest configuration as defined from the control center.

eBIRDY is a web platform enabling the management, the deployment and the updating of Birdy pagers range (BIRDY WP / BIRDY III / BIRDY Tetra).

SPY POCSAG – POCSAG network monitoring

The SPY POCSAG allows you to monitor your paging network in a very economical way.

SPY POCSAG is a server software made to monitor POCSAG networks, enabling you to record all the messages and alarms received by BIRDY WP pagers interacting over IP.

The server is composed by a software based on Windows and by an SQL database enabling you to safely record all the messages and parameters. The display software can be installed on several PCs which can work simultaneously in order to check all the messages received by SPY BIRDY WP terminals. Thanks to its parameterizable map, it is easy to check if a SPY BIRDY WP detects some errors or electrical field problems. An invaluable asset for every operator, both performance & price-wise.

INTERNATIONAL PROJECTS

In Denmark: **RADIOCOM** has delivered the first **TETRA pager** to the Bornholm Island Fire Brigade. Trying out the TETRA pager for the first time at a Danish Fire Brigade Exhibition in Fredericia, August 2012, convinced them this was the solution they had sought.

In Austria, **SIGLFUNK** delivered several **BIRDY WP** to institutional customers. The POCSAG pager combines many high performance features amongst which toughness, user-friendliness and long battery life feature prominently. Moreover, its high water-resistance (IP 67) makes BIRDY WP the perfect messaging solution for many fields of activity.

In Belgium, **DEBOCOM** delivered over 300 2-way POCSAG-GPRS BIRDY III to the Waasland province. More provinces have also opted for 2-way POCSAG-GPRS BIRDY III Solution. **BIRDY III** includes a GSM/GPRS module enabling an automatic acknowledgment when a message is received and a confirmation of reading by the firefighter which can inform the control room whether he/she can participate in the operation.
